

TBL LIMELIGHT ENTERPRISE NETWORKING

Network engineers managing hundreds of devices today will be expected to manage 1 million by 2020.*
To support this growth, networks of the future will need to be more dynamic and intuitive.
This involves a shift from hardware-centric to software-defined networking.

Why Limelight Enterprise Networking

TBL **Limelight Enterprise Networking** is a consumption model of wired, wireless and Software-Defined WAN networking as a service.

We design, implement and support networks that meet the needs of your business today, with the flexibility of quickly and efficiently adapting to the demands of tomorrow.

Limelight Enterprise Networking solutions allow you to:

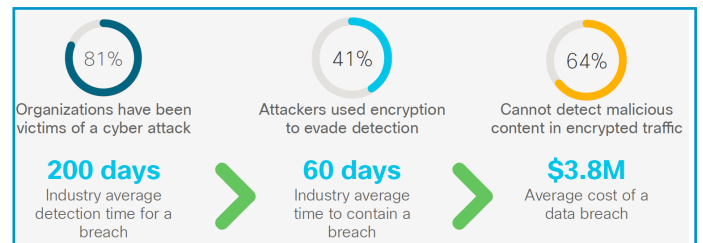

- Use your network as a powerful security sensor and enforcer.
- Leverage a fully integrated, end-to-end unified communications platform that includes collaborative applications like voice, video, IM, and call center.
- Gain a competitive advantage through the Internet of Everything, with mobile applications at its core.

Limelight Enterprise Networking Solutions

Is Your Network Designed For Encrypted Threat Analytics?

Encryption enables greater privacy and security; however, attackers are also using it to conceal malware and evade detection by traditional security products. Unfortunately, many organizations don't have a way to detect malicious activity in encrypted traffic without decryption. We do.

.....
With Limelight Enterprise Networking, your network's infrastructure will allow you to incorporate security products that can detect malware hidden in encrypted traffic without any decryption.
