

ENDPOINT PROTECTION

Uncover the 1% of Threats You've Been Missing

Nearly all endpoint security solutions on the market claim to block 99% of malware.
But what about the 1% of threats they miss?

WHY ENDPOINT PROTECTION

The threats in that 1% will wreak havoc on your network. If you rely solely on traditional point-in-time technologies, such as antivirus, those threats can go undetected for months.

Endpoint Protection solutions provide comprehensive protection against the most advanced attacks. They prevent breaches and block malware at the point of entry, then rapidly detect, contain, and remediate advanced threats that evade front-line defenses and get inside your network.

Prevent
Strengthen defenses using the best global threat intelligence, and block both file-less and file-based malware in real time

Detect
Continuously monitor and record all file activity to quickly detect stealthy malware

Respond
Accelerate investigations and automatically remediate malware across PCs, Macs, Linux, servers, and mobile devices

NEXT-GENERATION ENDPOINT SECURITY

Organizations are embracing more mobile, flexible workforces. Employees are enabled to be productive on and off the corporate network using a variety of devices, ranging from laptops to tablets to phones. Networks are now architected to allow remote access to even the most sensitive data.

Unfortunately, attackers are catching on to these trends. They're targeting your employees and the gold mine of data on their devices with threats designed specifically to get around traditional endpoint security tools. So how can your business continue to innovate, embrace a digital transformation, and mobilize your workforce without sacrificing security?

Next-generation Endpoint Security is the integration of prevention, detection, and response capabilities in a single solution, leveraging the power of cloud-based analytics.

FEATURES & BENEFITS

Stop malware. Automatically identify ransomware and other advanced threats before they reach your endpoints, using multiple preventative engines. Since it takes a cloud-based approach to threat intelligence and file analysis, it's constantly fed the most up-to-date information.

Eliminate blind spots. Get a holistic view of your endpoints, regardless of operating system. Gain deeper visibility, context, and control of servers and endpoints running Windows, MacOS, Android, iOS, or Linux.

Discover unknown threats. **Endpoint Protection** solutions continuously monitor, analyze, and record all activity to uncover malicious behavior. Upon detection, they drastically reduce investigation and remediation time by providing a complete history of the threat. They then automatically share that intelligence with all devices the threat has touched in your network.
