VOICE

Control
Customize to your needs.
Turn on or off any feature, at anytime.

Performance
No dropped calls, no connectivity issues,
high voice quality. Always.

Reliability
Consistent service so your
conversations are never interrupted.

WHY VOICE

Voice features make up an integrated and inter-operable platform that offers all the communications and collaboration services you need. Powered by industry-leading collaboration technologies, **Voice** capabilities deliver an open architecture, flexible deployment models, secure inter-company communication, enterprise social software and video as a transformative element, while delivering a holistic collaboration experience. With **Voice** solutions, organizations improve collaboration with technologies that empower people to engage and innovate – anywhere, anytime, on any device.

EMPOWER, ENGAGE, INNOVATE.

With the rapid growth of unified communications and collaboration solutions, how do you ensure compatibility across thousands of desktop and mobile devices and multiple, disparate voice and data systems? How do you ensure that the meeting experience is consistent across situations ranging from a telepresence room system to a web conference on a mobile phone or desktop endpoint?

You do it with a family of packaged collaboration solutions that are based on a modular, building-block design, to let you easily support more users, devices, and applications by simply stacking additional servers to expand system capacity – without limits.

FEATURES & BENEFITS

Complete service offering
End-to-end collaboration capabilities include voice, video, conferencing, messaging, instant messaging and presence (IM&P), mobility, contact center, and more, for every user on any device from any location.

Scalable and highly available platforms
All-in-one, end-to-end collaboration solution designed for fast-growing enterprises. Voice's "Pay as you grow" platform scales to support deployments of any size.

Open and inter-operable architecture
Innovative system transparently supports third-party applications and video endpoints.

Each solution comes preloaded with all core applications ready to activate. This simplifies and reduces the time required to set up, install, and deploy collaboration capabilities across the organization.

Our unique lifecycle approach to the use of these services can enhance your technology experience, enabling powerful new ways to collaborate with coworkers, partners, and customers across any workspace to accelerate business advantage.
